

# Configuring and Troubleshooting Common EIGRP Features

---

**Nick Russo**

NETWORK ENGINEER

@nickrusso42518 [www.njrusmc.net](http://www.njrusmc.net)

# Agenda

How EIGRP stubs work

Unequal cost multipath (UCMP)

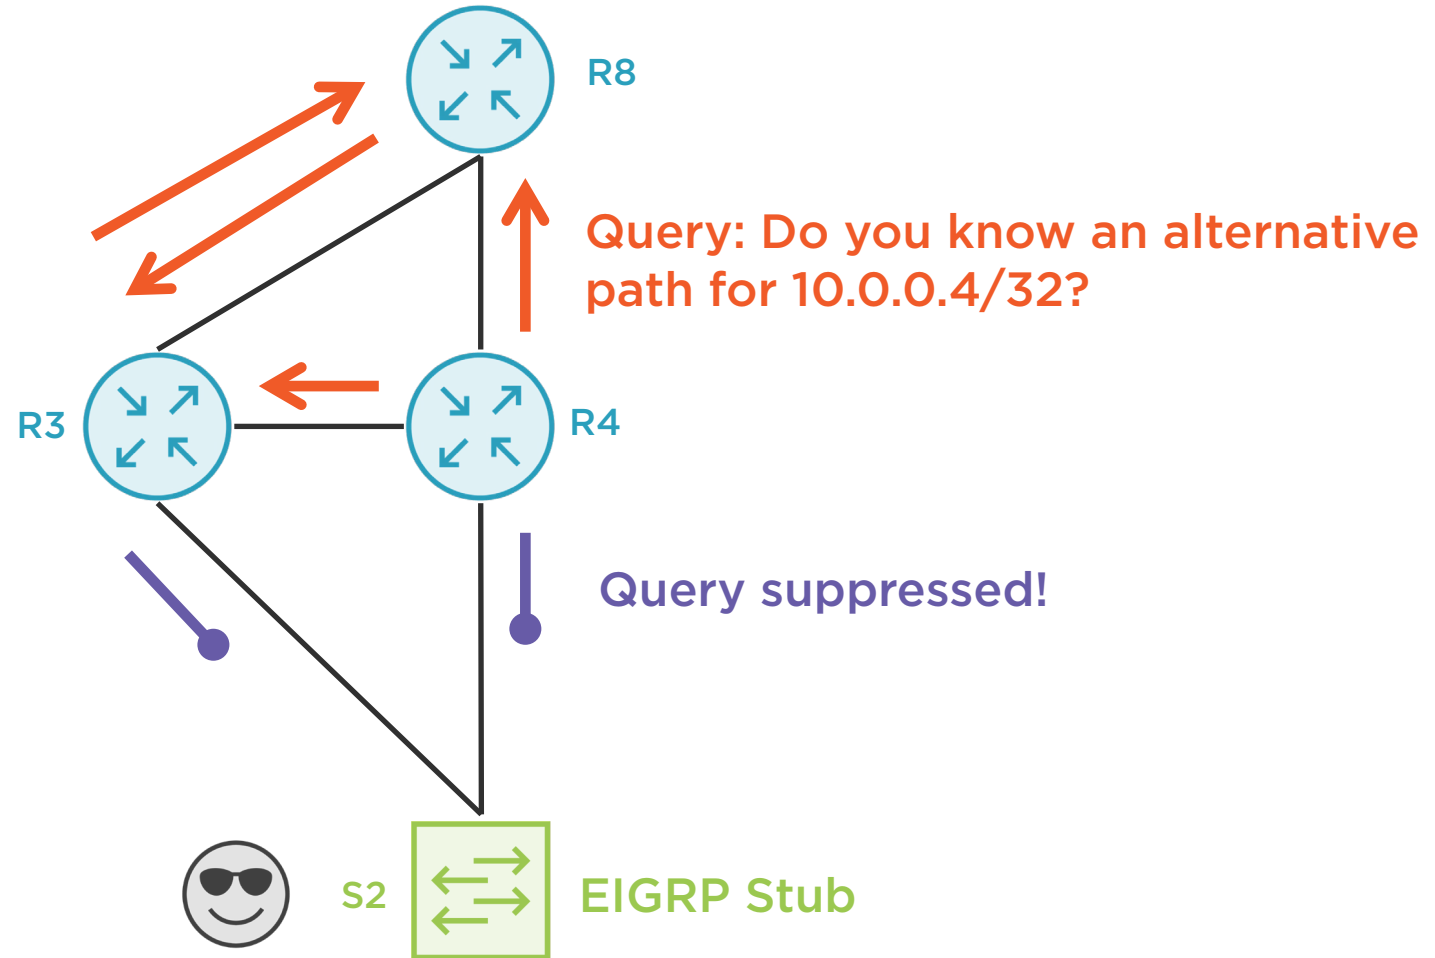

EIGRP authentication

# Dead End Roads

# EIGRP Stubs

# Some Stub Caveats

Updates still work

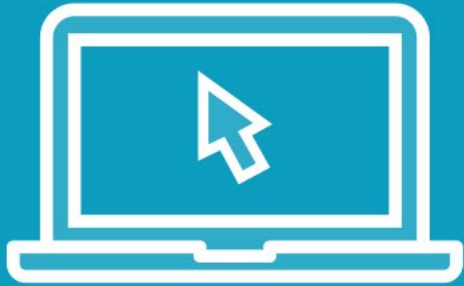

Still sends queries

Limited transit is OK

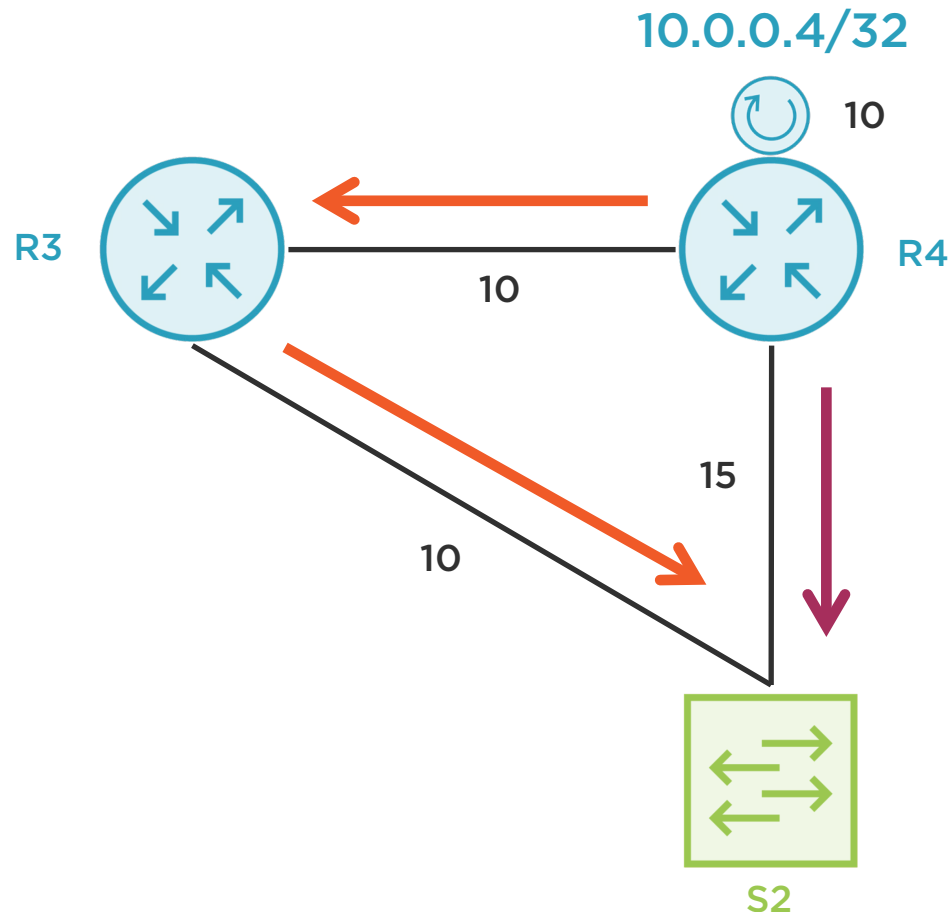

# Demo

## EIGRP stub validation

# EIGRP Unequal Cost Multipath (UCMP)

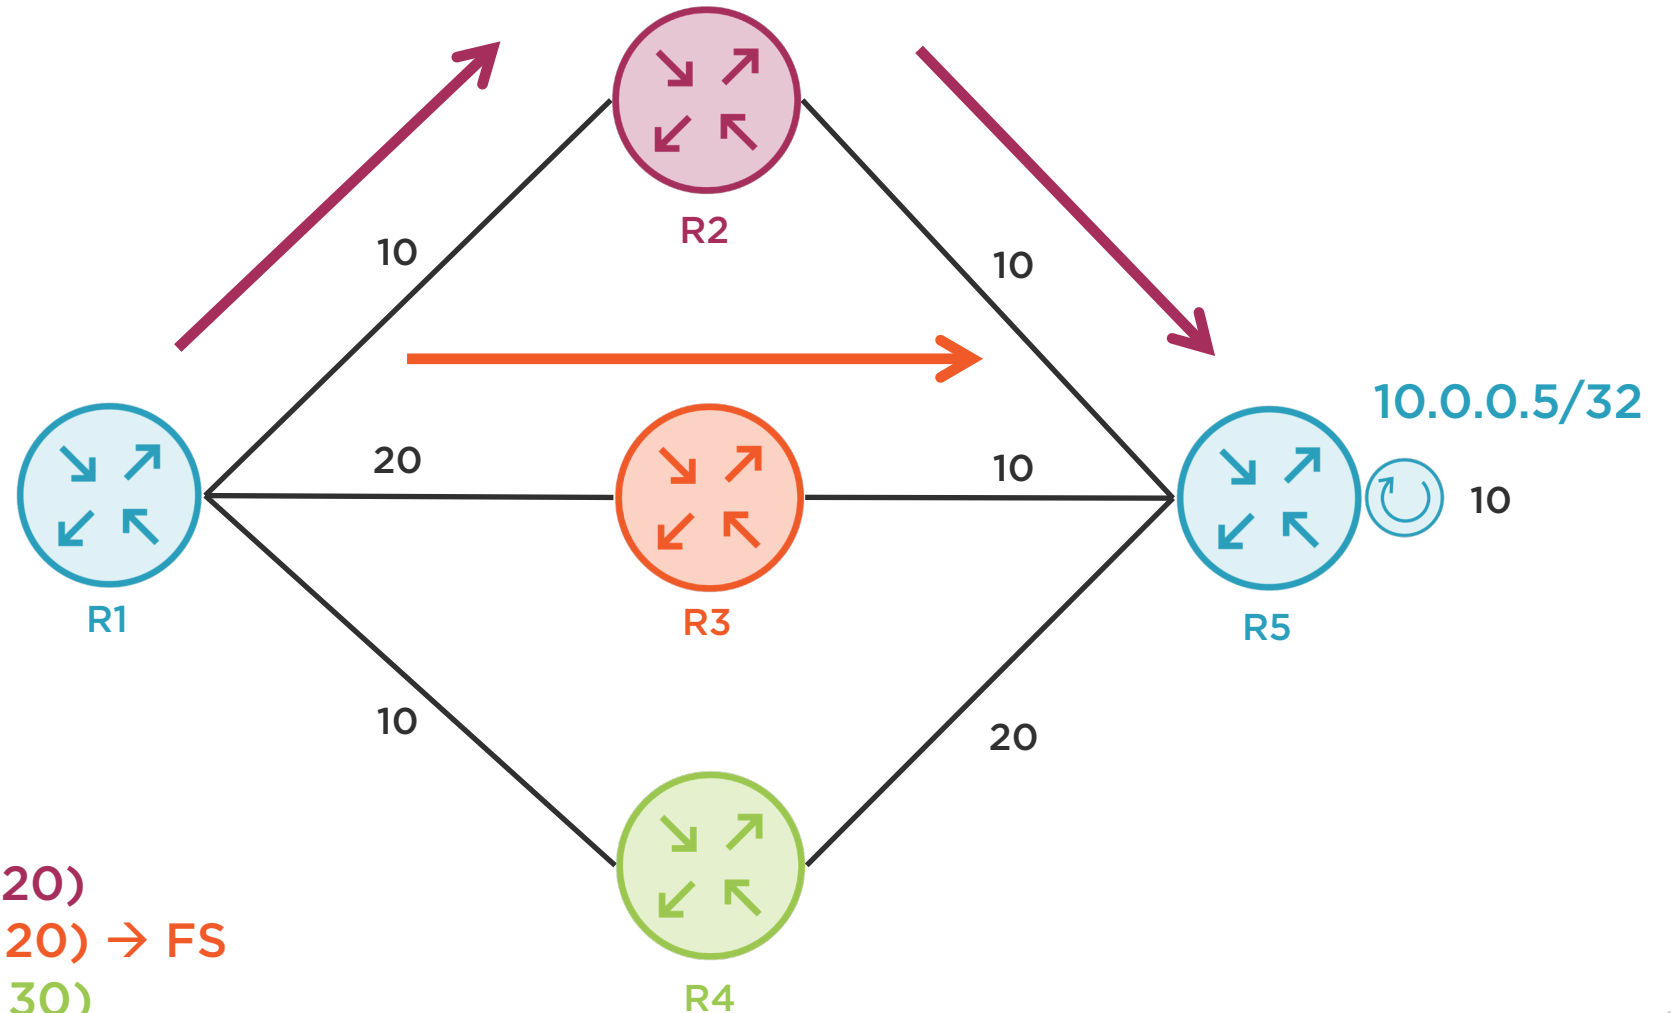

**Feasibility condition:**  
**Non-successor RD < prefix FD**

10.0.0.4/32 (FD = 25)  
via R4 (CD = 25 / RD = 10)  
via R3 (CD = 30 / RD = 20)

**Feasible successor!**

# EIGRP UCMP: Hard Mode

# Demo

## Enabling EIGRP UCMP with "variance"

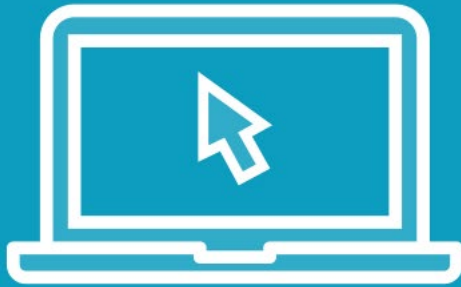

# Demo

## Troubleshooting a broken UCMP design

# Demo

## Various EIGRP Authentication methods

# Summary

**Reducing queries with stubs**

**UCMP with feasible successors**

**Authentication techniques**
